

Online Applications

Many online applications require that you provide an email address. Therefore, you should create an email account if you do not already have one.

Choose a quiet location to work in (i.e. your home, library, classroom).

Make sure you are working on a computer that you will be able to use for **at least** one hour.

If you are working on a laptop, be sure you can plug it in (to prevent the battery from dying while you are online).

Make sure you are working on a computer with a stable and secure internet connection.

Some online application forms are difficult to navigate (because of the format and the questions). If necessary, ask someone to assist you as you complete the online application. This person might be a family member, teacher, coach, mentor, etc.

Nearly all online applications require you to create a username or pin number, and a password. This means you have to create a username and a password that you will remember. Write it down and keep it in a safe place!
