

Instead of telling you the temperature, this thermometer gauges how angry you are. At the bottom of the thermometer you feel calm. Then, the thermometer shows when you start to feel a little annoyed or frustrated. Then, you may get angry at the next stage. The last stage of the thermometer represents when your anger is out of control.

Use this thermometer to identify what makes you feel this way. Then, identify coping strategies to use at each level. You should use your coping strategies at the earliest level possible so that you do not go all the way up the thermometer into the furious level. Specifically, you should do your coping strategies when you are frustrated or angry to avoid becoming furious.

Write 2 things or situations that make you feel each of the emotions listed below.

Furious

1. _____

2. _____

Angry

1. _____

2. _____

Frustrated

1. _____

2. _____

Calm

1. _____

2. _____

Write down 2 things you can do to make yourself feel better (coping strategies) at each elevated level on the anger thermometer.

Furious

1. _____

2. _____

Angry

1. _____

2. _____

Frustrated

1. _____

2. _____

Calm

1. _____

2. _____
